

## UV - DUCT - FL - NX disinfection system for HVAC

Applied inside ducts, or in the final section of AHU (Air Handling Unit) UV-DUCT-FL-NX creates an UVGI barrier that inhibits the proliferation of dangerous viruses, bacteria, moulds and spores settling inside Air Conditioning Systems.

UV-DUCT-FL-NX purifies homogeneously the airflow running through its powerful lamps, eliminating the microbial load and the spreading and distribution of hazardous and annoying pathogens inside buildings.

In AC systems an unpleasant biofilm covers usually all inner surfaces as the result of microorganisms combination and favourable conditions for their proliferation, such as temperature changes, high humidity and darkness. UV- DUCT-FL inhibits the creation of this biofilm increasing Indoor Air Quality and comfort. More specifically, the use of UV-DUCT-FL-NX eliminates important issues related to AC Systems and deadly illnesses (such as Legionella Pneumophila, Tuberculosis, Flu, etc.) but also “Sick Building Syndrome”, “Monday Fever”, Asthma and Allergies. UV- DUCT-FL-NX allows also the control of Hygiene high standards in Food industry and fights against Healthcare Associated Infections (HAI) in hospitals.

UV-DUCT-FL-NX application is important not only for IAQ and health, but a cleaner AC system is also more efficient from an economic point of view, with less operative and maintenance costs. As a matter of fact, using UVGI the need of filters replacement and clean of inner surfaces is less necessary than usual.

With UV-DUCT-FL-NX you obtain a deep and continuous disinfection and cleaning of your AC system, without the use of expensive and polluting chemicals, , in few words with UV-DUCT-FL-NX you have better comfort for people in the building, saving money.

Available models

### WHAT ARE UV-C RAYS?

Light in a broad sense can be divided in visible, infra-red and ultraviolet rays.

Ultra-violet rays (invisible) can be classified in:

- UV - A (with tanning properties)
- UV - B (with therapeutic properties)
- UV - C (with germicidal properties)

The germicidal effects of the UV-C radiation destroy DNA of Bacteria, Viruses, Spores, Fungi, Moulds and Mites avoiding their growth and proliferation.

UVGI technology is a physic disinfection method with a great costs/benefits ratio, it's ecological, and, unlike chemicals, it works against every microorganisms without creating any resistance.

Application in a duct

#### TECHNICAL FEATURES

- Selective UV-C Light Progress lamps (emission peak at 253.7 nm.) high efficiency, ozone free, pure quartz.
- Body in STAINLESS STEEL AISI 304
- All materials are tested for resistance to intense UV-C rays.
- Powered by electronic ballasts specific for Light Progress UV-C rays lamps.
- Powered by 110 or 240V
- Hourcounter and LED Alarms (optional).
- CE mark (LVD - EMC - MD - RoHS).

## UV - DUCT - FL - NX

simple, small and also retrofit

Application in A.H.U.

UV-DUCT-FL-NX family includes a range of flange modules with two “U” lamps of different sizes (from 20 to 50 cm) and power ratings (from 70 to 190 W) protected by a stainless steel grid.

Main features of UV-DUCT-FL-NX are the super compact sizes and the on-board commands, which allow easy application even in existing air conditioning systems (retrofit).

Its installation requires just a few simple steps: insert the lamps within the air duct through two holes using the drilling template provided, and screw UV-DUCT-FL-NX flange on the external channel wall, turn in ON and it's done!

Ballasts are inserted directly inside the case, and they are specific for Light Progress UV-C lamps, optimizing their performances and durability.

UV-DUCT-FL-NX is made with high quality and extremely durable components, and works perfectly in difficult operating conditions (high humidity, low temperature, etc.).
